This list may be used to find connections to your natal chart - just plug in any of your natal planet positions that correspond to the new and full Moons. Use the date and time to calculate each chart that makes a connection to your natal planets, adjusting time and longitude settings to your location.

Note: The Moon's degree is given - The Sun at full Moons and Lunar Eclipses is in the opposite sign. **OOB Moons; Eclipses.**

<~*~><~*~><~*~><~*~><~*~><~*~>

Interpretation of one of the above celestial events with your natal chart on tape:
